

INCIDENT RESPONSE AND
MONITORING

RansomAid

**Proactive Risk Mitigation & 24/7 Incident
Management - On-site and Remote**

The Need

The cost of a ransomware attack in lost/stolen data, time off-line, reputation and the ransom itself has forced some companies to close. Why wait for disaster? Multi-layered security measures should be taken now, proactively, to bolster your cybersecurity program so that even in an attack - you do not suffer catastrophic losses. Continuous risk assessments and mitigation methods are critical in identifying and dealing with potential ransomware threats proactively. While an attack is happening, you need to move quickly to minimize the damage, contain the threats and prevent further spreading

The Solution

The RansomAid team studies your systems, applications, and processes to identify potential vulnerabilities and creates a sophisticated protection plan for ransomware attacks. The team prepares proactively and methodically for worst-case scenarios, continuously evaluates threats, runs forensics, and **responds to incidents 24/7 in real time** (on site and remote). RansomAid protects your assets, contains the malware and provides a robust line of defense against the spreading of an attack that would otherwise cause devastating downtime and irrevocable financial loss

What to Expect

RansomAid **makes your company unattractive to attackers**, deterring them with too much effort. Security experts provide a detailed threat map identifying and categorizing your company's cyber threat landscape both externally and internally. Based on the risks specific to your business, they create a customized response plan for incidents. A handpicked team of experts is assembled to handle live incidents, and evolving threats are met 24/7 in real time by advanced detection technology, preventative countermeasures and deceptive techniques. Should an incident occur, we employ unique forensic analysis techniques to analyze all assets - disk, memory, and networks; to isolate an infected area/endpoint/user IDs, and to **make sure the attack is stopped in its tracks**

HolistiCyber – Defending what matters

HolistiCyber offers end to end, state of the art, nation state-grade cyber defense services & solutions, delivered by a team of world class, multidisciplinary cyber security experts.

World-class
expertise

Holistic approach

Exclusive 'We think
like a hacker'
methodology

Leadership

Unique access to
the darknet

Practical insights

Proprietary
technological and
automation tools
