

INCIDENT RESPONSE AND
MONITORING

RansomAID

**Proactive Risk Mitigation & 24/7 Incident
Management - On-site and Remote**

The Need

The cost of a ransomware attack in lost/stolen data, time off-line, reputation, and the ransom itself has forced some companies to close. Why wait for disaster? Multi-layered security measures should be taken, proactively, to bolster your cybersecurity program so that you do not suffer catastrophic losses even in an attack. Continuous risk assessments and mitigation methods are critical in proactively identifying and dealing with potential ransomware threats. While an attack is happening, you need to move quickly to minimize the damage, contain the dangers, and prevent further spreading.

The Solution

The RansomAID team studies your systems, applications, and processes to identify potential vulnerabilities and creates a sophisticated protection plan for ransomware attacks. The team prepares proactively and methodically for worse-case scenarios, continuously evaluates threats, runs forensics, and **responds to incidents 24/7 in real-time** (on-site and remote). RansomAID protects your assets, contains malware, and provides a robust line of defense against spreading an attack that would otherwise cause devastating downtime and irreversible financial loss.

What to Expect

RansomAID makes your company unattractive to attackers, deterring them with too much effort. Security experts provide a detailed threat map identifying and categorizing your company's cyber-threat landscape both externally and internally. Based on the risks specific to your business, they create a customized response plan for incidents. A handpicked team of experts is assembled to handle live incidents, and evolving threats are met 24/7 in real time by advanced detection technology, preventative countermeasures, and deceptive techniques. Should an incident occur, we employ unique forensic analysis techniques to analyze all assets, disk, memory, and networks; to isolate an infected area/ endpoint/user IDs, and to make sure **the attack is stopped in its tracks**.

HolistiCyber – Defending what matters

HolistiCyber offers end to end, state of the art, nation state-grade cyber defense services & solutions, delivered by a team of world class, multidisciplinary cyber security experts.

World-class
expertise

Holistic approach

Exclusive 'We think
like a hacker'
methodology

Leadership

Unique access to
the darknet

Practical insights

Proprietary
technological and
automation tools
