

What is the Trusted Advisor Program?

The Trusted Advisor Program is an 'a la carte' service that allows organizations to mix and match the required consulting and testing services based on their specific cyber-defense and business needs. Domain experts with years of nation-state grade experience help security leaders to assess, articulate and define the organization's particular requirements, stay ahead and minimize exposure to quickly evolving threats and risks. Ultimately the program makes every part of the business more resilient to cyber threats while at the same time encouraging flexibility, growth, and productivity. This framework outlines the organization's current cyber risk landscape and future business requirements so that the company's security program can scale with business growth, technology adoption, and emerging threats while successfully mitigating risks.

How does the Trusted Advisor Program work for me?

- 1. Our cybersecurity experts begin with a thorough assessment of the organization's current environment, policies, procedures, security initiatives, and the recent cyber defense plan.
- 2. The advisory team creates a customized services and tests plan (see mix and match sample on page 2) to exceed the organization's annual and long-term security key performance indicators. The program is based on the organization's specific cyber-defense needs and internal capabilities.
- 3. The advisory team works with the security leadership to get the services plan approved and monitors the progress of plan implementation. The goal is to ensure the organization is methodically prepared for cyberattacks and remains protected throughout the year.
- 4. The advisors continuously evaluate evolving threats, readiness levels, and defense mechanisms and serve as a sounding board for management and security teams. These nation-state-grade domain experts accompany the security teams throughout the journey.

Trusted Advisor Program - Baseline

WHAT SHOULD YOU EXPECT?

- A clear crafted plan productive, concise, and prioritized - to quickly update with changing threats to meet current and future needs.
- Our experts serve as a sounding board for management and security teams to continuously evaluate evolving threats, readiness levels, and defense mechanisms.
- A professional action plan for breaches and emergencies.
- Policy outline adapted to unique company business needs, priorities, and risk appetite.
- Implementing effective risk controls, minimizing exposure.
- Clear prioritization of security threats that need to be handled immediately vs. items that do not pose an immediate risk.
- Straight-forward remediation and mitigation tactics and workflows.

How can enterprises keep up with today's cyber threats? By getting ahead of them.

In recent years, there has been a quantum leap in cyber offenders' tactics, techniques, and sophistication and an increasingly evolved digital workplace. Organizations must have cybersecurity programs to protect their abilities and keep their businesses running smoothly. Additionally, every organization has unique needs, regulatory requirements, budgets, and priorities. Therefore, every organization also needs to go through the process of understanding each of these to create a roadmap for how they are going to protect themselves.

With the many varieties of security products/technologies available, understanding what the organization needs can often be daunting. And just buying the technology doesn't suddenly make the organization protected. Technology needs to be implemented and maintained, integrated with other technologies and processes, and work without becoming an impediment to doing business.

Organizations need a proactive cyber defense program that will scale and evolve quickly, along with the rapid changes in the cyber threat landscape. This service will provide that program and will soon advance and mature the organization's cyber security posture. HolistiCyber's nation-state grade expertise offers organizations a resilient and sustainable program to improve security controls and preemptive countermeasures for new and dynamic cyber threats.

Services 'mix & match' sample

Why HolistiCyber?

- 1. Nation-state grade expertise our staff of white-hat security experts is composed of former military and government offensive practitioners who can examine the attack surface from the vantage point of the attacker and not only from the company's vantage point. This includes a solid grasp of the sophisticated tooling available to today's attackers and access to those attack tools.
- 2. **Holistic approach** compliance, remediation, and mitigation solutions are tied to each company's unique business objectives and workflows. Security should complement productivity and growth and avoid hindering them.
